Charles Drew House

Charles Drew House uses a gas fired steam boiler to heat the 1\textsuperscript{st} and 2\textsuperscript{nd} floors. The boiler has a heat exchanger which heats water to provide heat for the 3\textsuperscript{rd} floor. The temperature of the 1\textsuperscript{st} and 2\textsuperscript{nd} floors rooms is controlled by turning the dial on the thermostat which is located in the first floor common area to the desired setting. The temperature of the 3\textsuperscript{rd} floor rooms is controlled by a thermostat that is located in the hallway on the 3\textsuperscript{rd} floor. Please note that the heaters in each room can not be blocked by beds, desks, etc. They need airflow for proper heat operation.
