Amherst College

Elemental

HOW FIVE
ELEMENTS
CHANGED
EARTH'S PAST
AND WILL
SHAPE OUR
FUTURE

Stephen Porder

Porder is the Acacia Professor in Ecology, Evolution, and Organismal Biology and in the Institute for Environment and Society, and is Associate Provost for Sustainability at Brown University—and a 1994 graduate of Amherst College.

Elemental explores how microbes, plants, and people used the fundamental building blocks of life to change our living planet, and how understanding our collective past can help us build a more sustainable future.
