

Computer Exercise 1

Due: Wednesday, February 10, at the beginning of lab.

Create scatter plots with vertical error bars using SigmaPlot from the following data sets (available on the course web site):

1. position vs. time data (`line.txt`)
2. arb. value vs. time data (`exp.txt`)
3. silver isotope decay data (`decay.txt`)

Include a preliminary caption for each figure.

Save your SigmaPlot notebooks somewhere safe for future use. There is nothing to hand in at this time, although I may ask to see your notebooks during lab.
