Merrill Science
South Side Vibration Work

Date Issued: July 23, 2014

Description of Impact:

The week of August 3rd, construction activities immediately to the south of Merrill/McGuire/Seeley Mudd will involve heavy construction and use of vibratory equipment that could cause vibration within the buildings. Vibration will be sporadic throughout the week; specific timing cannot be predicted. This time slot coincides with many researchers’ schedule, but we recognize that this may be suboptimal for some other researchers. We appreciate your patience and understanding as we get through the construction required close to the occupied buildings. The goal is to return the Merrill loading dock to operation and provide new parking spaces in time for the semester.

Start Date: Monday, August 3’ 2015
Finish Date: Saturday, August 8, 2015

Your cooperation is greatly appreciated.
If you have any questions please call the Service Center, X-2254.
